

ESCO Online Consultation

Dear Sir or Madam,

I am working as a contractor for the European Commission project "ESCO". I am contacting you, since we need your expertise to improve the transparency of occupations, skills and qualifications in the **Optical engineering** subsector.

ESCO is a multilingual classification of European Skills, Competences, Qualifications, and Occupations. It will help to:

- enhance the functioning of the labour market,
- bridge the communication gap between the world of work and the world of education and training,
- improve cooperation between public and private employment services and education and training institutions,
- reduce skill gaps by finding the jobs matching the skills of people - across borders and language barriers.

The Commission's services invite stakeholders to contribute with their expertise to the development of ESCO. We have already launched a general online consultation between 14th of October and end of December 2015, but in order to finish it we still need some further input in the **Optical engineering** subsector.

To this effect we have developed a specific platform - Online Consultation Platform - where we can gather your comments and feedback. On this platform, the Commission opened **3** occupations in the Manufacturing of electrical equipment, electronics and optical products sector for additional input,

- [Optoelectronic engineering technician](#)
- [Optomechanical engineer](#)
- [Photonics engineering technician](#)

Register here to contribute to the ESCO Online Consultation

Please be aware that the deadline for this second targeted consultation is the 15th of April 2016.

Please feel free to forward this message to other people in your professional network that might be interested to take part as well.

We look forward to your reply and working together.

Best regards,

ESCO European Skills, Competences, Qualifications and Occupations
